RESILIENCE: THE BIOLOGY OF STRESS & THE SCIENCE OF HOPE chronicles the birth of a new movement among pediatricians, therapists, educators and communities, who are using cutting-edge brain science to disrupt cycles of violence, addiction and disease.

"The child may not remember, but the body remembers."

"The sad thing is that a lot of our students think that what they are going through is normal. This is their normal. If no one has given them a way to think otherwise, I think that's why the cycle just keeps going and going and going."

- Cynthia Manifold, Kindergarten Teacher, Strong Elementary School, New Haven, CT

"There was a sense of disbelief. People actually said, 'Rob, this can't be true. Because if this were really true, it would've been studied and published.'"

- Dr. Robert Anda, Epidemiologist, Centers for Disease Control

"We tend to the world of mental health from the world of physical health. But the body doesn't do that. The body is only one."

- Dr. Victor Carrion, Stanford University

"If I had to boil it down for one thing for people to learn from this science, its to totally put to bed forever this sense that children who are born under disadvantaged circumstances are doomed to poor life outcomes. The science is saying that's just not true."

- Dr. Jack Shonkoff, Pediatrician, Director, Center on the Developing Child, Harvard University
